

BANCE

SUPER SKATE

- End frames are used for holding loads on and for lifting the loaded skate.
- Heavy loads can be tipped off clear at destination or in emergency. Long handles are used for good control.
- Handles instantly demount to ensure they do not foul the structure gauge.

Designed to carry sleepers, chairs, small plant, gas bottles, chippings, ballast, tools, destressing and lighting equipment etc.

The Bance Super Skate entered service with British Rail in 1989 and was designed in conjunction with British Rail Engineers for:-

- Safety
- Multi-purpose use
- Portability (by one man)
- Loads up to 1.5 tonnes
- Within loading gauge
